Indea—Vector: pSPORTI; Site 1: NotI; Site 2: SalI; Library made from pools of polyA selected RNA, isolated at different times post-infection (0 to 16 hrs) from African swine fever virus (isolate Pretorisuskop/96/4) infected swine macrophages. Wacrophages were derived from peripheral blood mononuclear cells cultured for 48 hrs on plastic in the presence of 30% L929 supernatant."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             140
                                                                                                                                                                                                                                                  This invention describes a novel protein (A) which comprises a membrane-spanning domain and an extracellular domain (BCD), where the ECD comprises biotin-binding activity. Using the proteins or encoding nucleic acid molecules it is possible to target biotinylated molecules to specific sites in tissues. Molecules targeted in this way may be taken up by the tissues or cells by endocytosis, allowing the molecules to exert their effects within or on the cell. This sequence encodes a bovine scavenger receptor class Alavidin fusion protein which is used in the description of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GlnAsnPheSerIleThrThrAspGlnArgPheAsnAspValLeuPheGlnLeuAsnSer 160
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         LeuLeuSerSerlleGlnGluHisGluAsnIleIleGlyAspIleSerLysSerLeuVal 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          40

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         원
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                              The bovine scavanger receptor protein gene was isolated by screening a bovine lung cDNA library with degenerate probes designed based on fragments of the purified accavanger receptor protein. The DNA encodes a scavanger receptor protein. The DNA encodes a scavanger receptor protein. The DNA encodes a scavanger receptor protein of the scavanger receptor protein inactivate extracellular portion of the scavanger receptor protein inactivate endotoxin-related substances and are used in the diagnosis and treatment of endotoxaemia. They may be administered to patients at high risk of symptomatic or endotoxic shock. The fragments may also be fixed to inert supports for purificin. purposes. The fragments may also be fixed to inert greater binding affinity for the endotoxin-related substance than the native scavanger receptor protein, or to more effectively neutralise the toxic or pathogenic effects of mole. That bind the scavanger receptor protein or of organisms which express such mols. See also AAQ28536-9.
                                                            Treatment and diagnosis of endotoxaemia and related disease states -
using a polypeptide fragment of the extracellular portion of a macrophage

```
New fusion polypeptide that is capable of forming a trimer, useful in preparing a composition for treating immune related or inflammatory disorders.
```

4; 24pp; English Example, Fig

The present invention relates to a polypeptide comprising a fusion protein capable of forming a trimer and comprising a heptad repeat containing region of the human macrophage scavenging factor protein containing region of the human macrophage scavenging factor protein appearing as ADB89007 fused to a second protein (specially a member of the tumour necrosis superfamily, TNFSF e.g. CD40L). CD40L is involved in sotype switching and is important in T-cell activation in the immune seponse. The fusion protein has reduced immunogenicity due to its ability to form trimers. Also included are the nucleic acids encoding the fusion proteins and a recombinant vector comprising the nucleic acid. The fusion proteins are used to deliver a therapeutic protein with reduced immunogenicity to a patient in need of the protein. The present sequence encodes the human macrophage scavenaging factor protein. Note:

The authors have mixed up the descriptions of the sequences as they appear in the figures, therefore there is a possibility that the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New scavenger receptor-producing animal cells - which have been transformed with vector contg. gene for coding human scavenger receptor I or II type under control of promoter, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The gene can be expressed from a cytomegalovirus promoter in a host cell eg. CHO cell. The resulting recombinant scavenger receptor can be used to detect modified lipoproteins or modified substances in the blood. See also AAQ21549.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequences given in AAQ47730-31 encode the human scavenger receptors I and II. The proteins encoded by these sequences may be used in the production of antihuman scavenger receptor antibodies (AHSRA). These peptides were used to immunise a mammal, pref. a rabbit, and anti- serum was prepared. A monoclonal antibody was prepared from HAP- resistant hybridoma. These antibodies may be used to determine the progress of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 progress
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GlyAsnGlySerGluAspGluMetArgPheArgGluAlaValMetGluArgMetSerAsn

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to a poly or monoclonoal antibody which targets a human type I or type II scavenger receptor epitope. The anti-scavenger receptor antibody can be used for the identification and determination of macrophages. The present sequence represents DNA encoding the human type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     anti-human scavenger receptor antibody useful for the identification the determination of macrophages.

                                                                                                                                                                                                                                                                        Human type I and type II macrophage scavenger receptor genes (AAT43259 and AAT43260, respectively) can be used to transfect human embryonic kidney 293 cells. The transfected cells show an enhanced ability to attach to a solid support and are useful for screening cpds. for biological activity, or for identifying antagonists of the scavenger receptor gene, e.g. to develop agents for treatment of atherosclerosis

The combination is useful as an array element in a microarray for monitoring the expression of a number of target polynucleotides. The microarray is particularly useful in the disponsis and treatment of cancer and immunopathology and neuropathology. The microarray is useful in diagnostics and treatment regimens, drug

discovery and development, toxicological and carcinogenicity studies, forensics and pharmacogenomics. The microarray is also useful for monitoring progression of diseases and for developing sophisticated profiles for the effects of currently available therapeutic drugs. The combination is also useful for purifying a subpopulation of mRNAs, cDNAs and genomic fragments and in research and diagnostic applications. The array can detect changes in expression in a large number of genes coding for different signaling pathway populations which can be used to diagnose various diseases including cancer e.g. adenocarcinoms and leukaemia, immunopathies e.g. AlDS and asthma, neuropathies e.g. Alzheimer's disease and Parkinson's disease. The present sequence represents a polynucleotide form part of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic

The invention relates to a composition of polymucleotide probes comprising at least a portion of a gene encoding a receptor-like polypeptide, second polymucleotide probes comprising at least a portion of a gene encoding an effector-like polypeptide. The probes of the composition are useful as array elements in a microarray for monitoring the expression of target polymucleotides. The microarray is useful in the diagnosis and treatment of cancer, an immunopathology or a neuropathology. It can also be used for drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. Composition and laso be used for monitoring the progression of diseases that may be associated with the altered expression of diseases that may be associated with the altered expression of diseases that may be associated with the altered expression of signalling pathway polypeptides. The composition can also be used to purify a subpopulation of mRNAs, cDNAs, or genomic fragments in a sample. The expression profile is also useful for the diagnosis and treatment of cancer, e.g. cancers of the adrenal gland, bladder, bone, bone marrow, brain, breast or cervix, an immunopathology, e.g. AIDS, diabetes, pancreatitis, osteoporosis or ulcerative colitis, or a neuropathology, e.g. dementia, ammesta, a meast for cultiple plands, bladder, bear appression. This sequence represents a cepilepsy, Allaheimer's diseases or depression. This sequence data for human polynucleotide probe of the invention. Note: The sequence data for

The gene can be expressed from a cytomegalovirus promoter in a host cell e.g. CHO cell. The resulting recombinant scavenger receptor can be used to detect modified lipoproteins or modified substances in the blood. See also AAQ21550. (Updated on 25-MAR-2003 to correct PA field.)

                                              The sequences given in AAQ47730-31 encode the human scavenger receptors I and II. The proteins encoded by these sequences may be used in the production of antihuman scavenger receptor antibodies (AHSRA). These peptides were used to immunise a mammal, pref. a rabbit, and anti- serum was prepared. A monoclonal antibody was prepared from HAT- resistant
                                                                                                                                                                                                                                                                                                                      20

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human type I and type II macrophage scavenger receptor genes (AAT43259 and AAT43260, respectively) can be used to transfect human embryonic kidney 293 cells. The transfected cells show an enhanced ability to attach to a solid support and are useful for screening cpds. for biological activity, or for identifying antagonists of the scavenger receptor gene, e.g. to develop agents for treatment of atherosclerosis

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       594
TITLE OF INVENTION: GENETIC POLYMORPHISMS ASSOCIATED WITH
TITLE OF INVENTION: MYOCARDIAL INFARCTION, METHODS OF DETECTION AND USES:
FILLE REPERENCE: CLORO1499
CURRENT APPLICATION NUMBER: US/10/741,600
CURRENT PILING DATE: 2003-12-22
NUMBER OF SEQ ID NOS: 73997
SEQ ID NO 570
LENGTH: 2877
TYPE: DNA
TYPE: DNA
ORGANISM: Homo sapiens
US-10-741-600-570
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              80
